

Custom Menu

The custom menu widget allows you to display one of the several available menus on your WebDVM4 website. Menus contain links to other pages within your clinic's website and help visitors navigate around your site.

The diagram illustrates the configuration and live preview of the Custom Menu widget. On the left, the configuration panel shows the title 'This is a Custom Menu' and the selected menu 'Footer'. On the right, the live preview shows the menu items: Site Map, Contact, Join Our Team, and Privacy. Blue lines connect the configuration fields to the corresponding elements in the live preview.
