**Please take time to review this form and sign the authorization.**

Our greatest concern is the well-being of your pet. To minimize risks associated with anesthesia and surgery, we will perform the following procedures in addition to a thorough physical exam.

**PRESURGICAL BLOOD WORK:**

This allows us to detect conditions that might not be apparent on exam. A complete blood count (CBC) will check for anemia, infection and possible bleeding tendencies. A blood chemistry profile will check for liver and kidney disease and may indicate metabolic problems.

**IV CATHETER AND FLUID THERAPY:**

We will place an IV catheter prior to surgery and administer IV fluids while your pet is under anesthesia. This required procedure supports the cardiovascular system, maintains hydration and allows rapid administration of drugs in case of emergency.

**ANTIBIOTICS AND PAIN MANAGEMENT:**

Post-dental antibiotics and pain relief medications will be determined by the Doctor on an individual patient basis. This includes both in-hospital and at-home pain management.
